

# The Layers of CYBERSECURITY

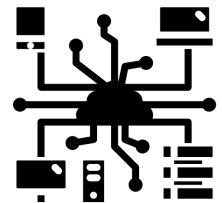

We know your business is important to you.  
That is why cybersecurity is vital to your business.

Adequately protect all aspects of your business by layering your cybersecurity – End-Point, Network, and Penetration.

## PENETRATION PROTECTION

This layer of cybersecurity is like a bubble around your business technology to ensure all aspects are working as intended and proactively identifying vulnerabilities. To meet cybersecurity insurance requirements your business needs this layer of cybersecurity.

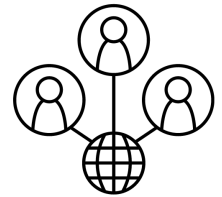

LAYER 3

Vulnerability Scanning

## NETWORK PROTECTION

This layer of cybersecurity is like a security guard watching your building for intruders or suspicious activity. It is best business practice to have this layer of cybersecurity.

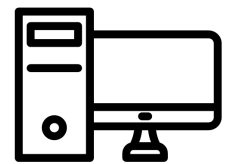

LAYER 2

Network Monitoring

Back-Up

## END-POINT PROTECTION

End-point protection tools are like the doors and locks to your valuables. At a bare minimum, your business should have this layer of cybersecurity.

LAYER 1

Anti-Virus

Workstation/Server Monitoring

Email Filtering
